- Sat the SENSITIVITY Control. (SEN column on tube chart).
   Set up the program switches if the tube is to be tested in the programmed section (No.s.) through 14 on chart).
  - Plug the tube into the socket indicated in the "SKT" column of the chart. Do not plug in more than one tube at a time. Connect plate cap if designated in column "C"
- Test in sequence: SHORTS AND
- SMULLS AND
  GRID EMISSION The tube is defective if the shorts indicator lights, or
  if the motor reads in GRID EMISSION-REJECT area

for either test,

- TEST 1 Tube defective if meter reads had on the BAD-AGOOD scale of the meter, unless tube chart indicates otherwise. (EX. Good over 40). Some low voltage tubes use TEST 2 (Refer to tube chart Column TB (Test Button)).
- TEST 2 Same as TEST 1 for dual tubes when tested in the Jet check section. Also used for low voltage tubes when tested in the programmed section. As above refer to tube chart column TB.
- LIFE TEST Short tube life if meter reading drops 25% from TEST 1 or TEST 2 reading.
- NOTE:1 Some tubes will read beyond full scale. This is normal when the tube is much better that average.

NOTE 2 Tubes marked NOTE 2 1AY2, 18H2, 18L2, etc., do not have sockets but can be tested as follows. Connect 2 pieces of wire to bottom leads or soraw dermittals on base of tube, insert these wires into socket #24 pirr No's 1 and 8. (These pins are on each side at keyway on socker 24), Connect top cap to cea on tube using another wire if necessary and plug into jack "W"-Test tube per setup instructions in chart, Caution-Donos touch exposed plate leads while test button is pressed

### ADDITIONAL INFORMATION

For your convenience we have added a Foreign vs. American cross reference type guide on Pages 56 through 60. The Foreign tube types tisted may be tested on the Model 747 by sinjply referring to the test information for the American type number
